© ROGER VAN ZANDVOORT

# Viral Pneumonia Case

Weighted repertory ranking across the scored rubric set. Narrower rubrics contribute more than broad ones by using inverse remedy frequency.

## CASE FRAME

Acute viral pneumonia with high fever, hard dry irritating cough, blood-streaked sputum, inflamed throat and nares, breathing difficulty during fever, fear of being left alone, and sleeplessness from cough.

## RUBRIC COUNT

9 scored rubrics built from the pneumonia, cough, inflamed air-passages, and mental accompaniment picture.

## APPROACH

Objective repertory calculation only. Remedy names mentioned in the source text were not used to choose the rubric set or guide the ranking. The method follows standard principles of transparent and reproducible research.

## Case Text

I was called on 26 June 1960. He had arrived from Oberammergau the previous night to stay with his niece, and thought he had thrown off a slight cold.

### History

During the morning of the day on which I was called he had developed a fever, with temperature 102°-103° and had been awake all night with a hard cough.

Sputum had been bloodstained on two occasions, with bright red streaks.

He was normally tough and threw off colds, but this time he felt ill.

### On examination

At 7.30 p.m., I found him to be a silent man.

His temperature was 102°. Pulse 90. Respiration 24.

He had a hard, dry, irritating cough.

He held his wife's hand and seemed afraid to be left alone.

His throat and nares were acutely inflamed.

Examination of chest revealed percussion note dull at the left base, with patchy broncho-vesicular breathing.

There were fine crepitations left apex anteriorly.

### Clinical diagnosis

Virus pneumonia involving left apex and left base.

### Treatment

He was given Phosphorus 1M 2-hourly for 48 hours.

### Pathological report summary

"Sedimentation rate maximal all methods.

The whole picture is quite consistent with virus pneumonia."

### Progress

The following day he was very much better, with a temperature of 98°.

Pulse 80. Respiration 18.

His cough was less severe and he had been able to sleep.

Chest examination revealed a shower of fine crepitations at the left base, otherwise physical signs had not changed.

Next day he reported having slept well, undisturbed by coughing.

Temperature remained 98°.

Pulse was down to 76.

Respiration was 16.

Chest: left apex clear, left base prolonged expiratory sounds but no crepitations.

He then told me he always had an 8-day fever with any cold, with the maximal rise at 4-8 p.m., then dropping.

This had never been accounted for by blood examination.

## Rubrics Used

- Chest; Inflammation; Lungs, Pneumonia [500 remedies; max grade 4; broad]
- Respiration; Difficult; Fever, During [28 remedies; max grade 3; medium]
- Cough; Dry [694 remedies; max grade 4; broad]
- Cough; Irritating [106 remedies; max grade 4; broad]
- Expectoration; Bloody, Spitting Of Blood [365 remedies; max grade 4; broad]
- Mind; Company; Desire For; Alone, Agg. Being [130 remedies; max grade 4; broad]
- Throat; Inflammation, Sore Throat [664 remedies; max grade 4; broad]
- Nose; Inflammation [1069 remedies; max grade 4; broad]
- Sleep; Sleeplessness; Cough, From [79 remedies; max grade 4; medium]

## Semi-Bayesian Analysis

Weighted repertory ranking across the scored rubric set. Narrower rubrics contribute more than broad ones by using inverse remedy frequency.
